This is a "new" post A because I first posted in the wrong category and B because Photo Buggerit has decided to start charging for hosting so I've closed my account. So here goes again with images uploaded from Amazon Prime
Picked this up a show ages ago and it's been gathering dust since then

[image]
Very simple kit with little detail such as engine, plumbing, suspension etc. Probably 1990 vintage

I'm not spending a lot of time on this one as I'm just looking for an OOB build away from flying things. I've sent for the correct Ferrari Zero paint so will get started soon. I'll try to do a short build thread as things move along. More soon
Thanks for looking
